DOCTORAL THESIS
2024

Theoretical and data-driven models in Ecology

Àlex Giménez Romero

DOCTORAL THESIS
2024

Doctoral programme in Physics

Theoretical and data-driven models in Ecology

Àlex Giménez Romero

Thesis Supervisor: Manuel A. Matías
Thesis Tutor: Cristóbal López Sánchez

Doctor by the Universitat de les Illes Balears

A en Manuel Miranda
pel seu suport i ajuda
durant tots aquests anys.
Sempre estaràs amb mi.
i recordare sempre
el que em vas ensenyar.

Dr Manuel A. Matías of the Consejo Superior de Investigaciones Científicas (CSIC)

I DECLARE:

That the thesis title *Theoretical and data-driven models in Ecology*, presented by Àlex Giménez Romero to obtain a doctoral degree, has been completed under my supervision and meets the requirements to opt for an International Doctorate.

For all intents and purposes, I hereby sign this document.

5. Idealista spatial segmentation of the real state market

Introduction

1. The global biodiversity crisis

2. Why do we need models?

a

b

c

$\rho(t)$

Time steps t

- ○ T = 1/8 (I)   × T = 4/8 (II)
- △ T = 2/8 (I)   ○ T = 5/8 (III)
- + T = 3/8 (II)

d

$\rho(t)$

Time steps t

- ○ T = 1/8 (I*)   × T = 4/8 (II)
- △ T = 2/8 (I*)   ○ T = 5/8 (III)
- + T = 3/8 (II)

## 3. Main original contributions of this thesis

II

Realistic models for vector-borne plant diseases

4. Vector-borne diseases with non-stationary vector populations: the case of growing and decaying populations

5. A compartmental model for *Xylella fastidiosa* diseases with explicit vector seasonal dynamics

6. Degree-day-based model to predict egg hatching of Philaenus spumarius (Hemiptera: Aphrophoridae), the main vector of *Xylella fastidiosa* in Europe

III
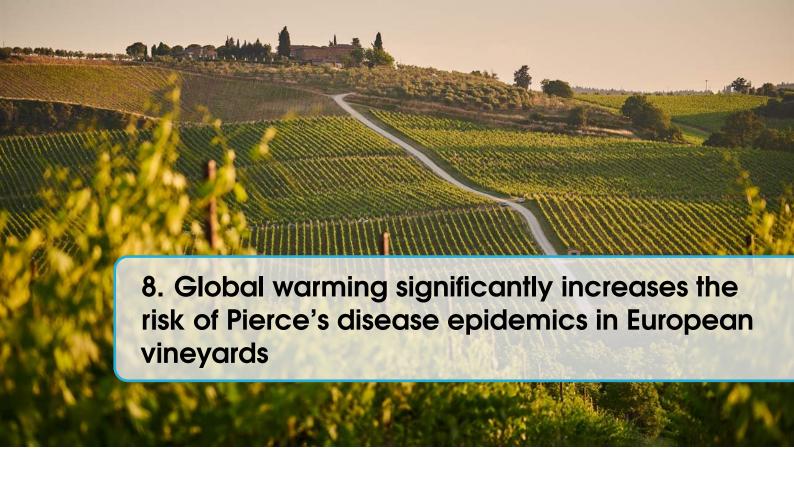

Modelling the risk of vector-borne plant diseases

7. Global predictions for the risk of establishment of Pierce's disease of grapevines

8. Global warming significantly increases the risk of Pierce's disease epidemics in European vineyards

9. High-resolution climate data reveals increased risk of Pierce's Disease for grapevines worldwide
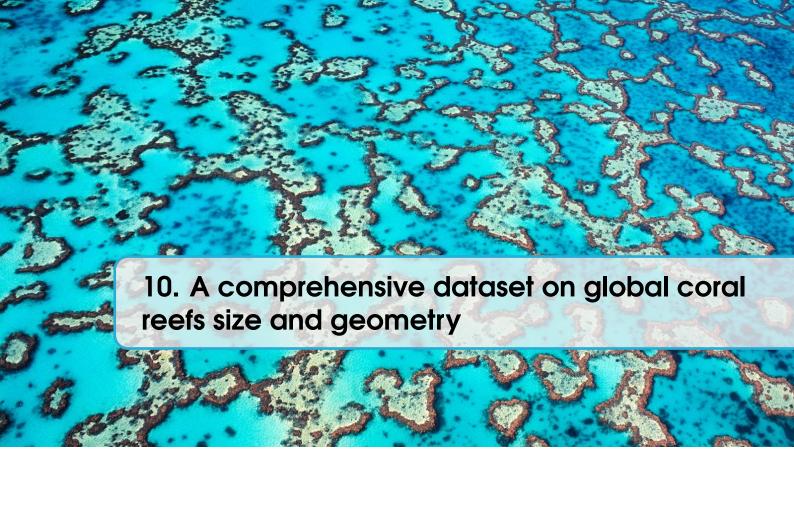

IV

Data-driven methods for global ecological problems

10. A comprehensive dataset on global coral reefs size and geometry

11. Universal spatial properties of coral reefs

12. Mapping the distribution of seagrass meadows from space with deep convolutional neural networks
